PROFILE SUMMARY

Computer Science Engineering student with 1+ years of hands-on programming experience in Java, C++, and Python, and a strong foundation in object-oriented programming, data structures, and algorithms. Experienced across three internships and multiple independent projects spanning full-stack, embedded, and machine-learning systems. Adept at applying sound engineering principles to solve complex problems, collaborating with cross-functional teams to gather requirements, and quickly learning new tools and methods to build reliable, scalable software.

TECHNICAL SKILLS

Languages: Java, C++, C, Python

Core: Object-Oriented Programming (OOP), Data Structures & Algorithms, Software Development Life Cycle (SDLC)

Database: PostgreSQL

Tools: Git, GitHub, Figma

INTERNSHIPS

Java Full Stack Development Intern — DEV Technology Solutions

- Learn Java Basics and Html structure build basic level projects.

Artificial Intelligence & Machine Learning Intern — VEI Technologies

- Learn about the Machine Learnings and how to build the AI model and Machine model in different type

Embedded Systems & IoT Intern — SAN Technovation Pvt. Ltd.

- Programmed embedded systems in C/C++ on microcontroller platforms, integrating sensors and IoT connectivity for real-time data collection.
- Debugged hardware-software interactions and optimized firmware to improve reliability under real-world operating conditions.

PROJECTS

MedChain — Secure Hospital Management System (React.js, Node.js, Express.js, PostgreSQL, Solidity, Hyperledger Besu)

- Designed and built a full-stack blockchain-based platform to securely manage hospital records, structuring frontend and backend code around modular, object-oriented components.
- Implemented smart contracts to enforce data integrity and access control across the system.

GitHub: <https://github.com/Kanishk0224/Medchain-Besu.git>

Smart Parking System (React.js, Express.js, ESP32, Firebase RTDB, YOLOv8, OpenCV, Python)

- Built a real-time parking detection system combining ESP32 hardware with Firebase Realtime Database for live status updates across a React.js dashboard.
- Applied YOLOv8 and OpenCV in Python to detect vehicle occupancy from camera feeds, improving space-utilization accuracy.

GitHub: <https://github.com/ijazAhamed1234/Smart-Parking-System.git>

StealthSense — AI-Based PostgreSQL Security Extension (PostgreSQL, C, Python, Machine Learning — In Progress)

- Developing a PostgreSQL security extension in C and Python that applies machine learning to detect anomalous query patterns and flag potential threats in real time.

GitHub: <https://github.com/ijazAhamed1234/stealthsense-postgresql-ml-security.git>

ACHIEVEMENTS

- Programming Toppers — 1st Place, Synergy Squad 4.0
- 1st Prize — UI/UX Design Challenge, Spring Fest 2K25
- Student Ambassador, Synergy Squad 4.0

EDUCATION

Bachelor of Engineering (B.E.) — Computer Science and Engineering

CGPA: 8.23 / 10 | Expected Graduation: 2028

Certification: Diploma in Computer Applications (C & C++) — CSC
